| Building Description | 11-14 Jervis Close. The purpose-built 2 storey block of flats is set within a large housing estate The property has two exit doors one is the main entrance door, and the other at the rear of the building. Both doors are provided with overhead self-closing device and push to release buttons A fireman's door override switch is provided on the front wall Two flats are provided on each floor level The flats are provided with new fire doors which were all in good condition based on visual inspection however as the types are different it could not be confirmed if the doors are compliant It is recommended that the doors are further inspected by a qualified surveyor to ensure they are fit for purpose The windows on the stairs are fixed and cannot be opened to provide fresh air and ventilation, however open louvres are provided above the window which will allow fresh air to circulate Waste bins are stored outside in the yard The escape routes including the stairs were generally clear of obstruction although some minor items had been stored outside flat 13 |

| | The property is not provided with a fire detection and warning system in the common areas as the evacuation strategy is simultaneous evacuation. There is no provision of firefighting equipment, and signage appeared suitable for the property and end users which included, general fire action notices, no smoking signs and fire action notices. Emergency lights are provided which cover all escape routes and are identified by green LED. No access was provided into flats to establish what level of domestic fire alarm system is provided. Overall, the property appeared well kept, and clean and tidy |

| ZAAR1 | Likelihood of Fire Low: Unusually low likelihood of fire as a result of negligible potential sources of ignition. Medium: Normal fire hazards (e.g. potential ignition sources) for this type of occupancy, with fire hazards generally subject to appropriate controls (other than minor shortcomings). High: Lack of adequate controls applied to one or more significant fire hazards, such as to result in significant increase in likelihood of fire | |
| Answer | | Finding/Observation |
| Medium | | |

| Ref. | Question | Policy Principles |
|---------|--|---------------------|
| ZAAR2 | Potential Consequences of Fire Slight harm: Outbreak of fire unlikely to result in serious injury or death of any occupant. Moderate harmful: Outbreak of fire could foreseeably result in injury (including serious injury) of one or more occupants, but it is unlikely to involve multiple fatalities. Extreme harm: Significant potential for serious injury or death of one or more occupants likely to involve multiple fatalities | |
| Answer | | Finding/Observation |
| Moderat | e Harm | |

| Ref. | Question | Policy Principles |
|---------|--|---------------------|
| ZAAR3 | Premises Risk Rating | |
| | Trivial: No action is required and no detailed records | |
| | need be kept | |
| | Tolerable: No major additional controls required. | |
| | However, there might be a need for improvements that | |
| | involve minor or | |
| | limited cost. | |
| | Moderate: It is essential that efforts are made to | |
| | reduce the risk. Risk reduction measures should be | |
| | implemented within a | |
| | defined time period. Where moderate risk is | |
| | associated with consequences that constitute | |
| | extreme harm, further | |
| | assessment might be required to establish more | |
| | precisely the likelihood of harm as a basis for | |
| | determining the | |
| | priority for improved control measures. | |
| | Substantial: Considerable resources might have to be | |
| | allocated to reduce the risk. If the building is | |
| | unoccupied, it should not | |
| | be occupied until the risk has been reduced. If the | |
| | building is occupied, urgent action should be taken. | |
| | Intolerable: Building (or relevant area) should not be | |
| | occupied until the risk is reduced | |
| Answer | | Finding/Observation |
| Moderat | e | |

| Ref. | Question | Policy Principles |
|-----------|--|---------------------|
| ZAAR4 | On satisfactory completion of all remedial works the risk rating of this building may be reduced to: | |
| Answer | | Finding/Observation |
| Tolerable | | |

Risk Rating

The following simple risk level estimator is based on a more general health and safety risk level estimator of the type contained in BS 8800:

| Libelihaad of five | Potential consequences of fire | | | |
|--------------------|--------------------------------|---------------|--------------|--|
| Likelihood of fire | Slight Harm | Moderate Harm | Extreme Harm | |
| Low | Trivial | Tolerable | Moderate | |
| Medium | Tolerable | Moderate | Substantial | |
| High | Moderate | Substantial | Intolerable | |

Taking into account the fire prevention measures observed at the time of this risk assessment, it is considered that the hazard from fire (likelihood of fire) at these premises is:

Medium

In this context, a definition of the above terms is as follows:

Low: Unusually low likelihood of fire as a result of negligible potential sources of ignition.

Medium: Normal fire hazards (e.g. potential ignition sources) for this type of occupancy, with fire hazards generally subject to appropriate controls (other than minor shortcomings).

High: Lack of adequate controls applied to one or more significant fire hazards, such as to result in significant increase in likelihood of fire

Taking into account the nature of the building and occupants, as well as the fire protection and procedural arrangements observed at the time of this fire risk assessment, it is considered that the consequences for life safety in the event of fire would be:

Moderate Harm

In this context, a definition of the above terms is as follows:

Slight harm: Outbreak of fire unlikely to result in serious injury or death of any occupant.

Moderate harmful: Outbreak of fire could foreseeably result in injury (including serious injury) of one or more occupants, but it is unlikely to involve multiple fatali-ties.

Extreme harm: Significant potential for serious injury or death of one or more occupants likely to involve multiple fatalities.

Accordingly, it is considered that the risk to life from fire at these premises is:

Moderate

A suitable risk-based control plan should involve effort and urgency that is proportional to risk. The following risk-based control plan is based on one advocated by BS 8800 for general health and safety risks:

| Risk Level | Action and time table |
|-------------|--|
| Trivial | No action is required and no detailed records need be kept. |
| Tolerable | No major additional controls required. However, there might be a need for improvements that involve minor or limited cost. |
| Moderate | It is essential that efforts are made to reduce the risk. Risk reduction measures should be implemented within a defined time period. Where moderate risk is associated with consequences that constitute extreme harm, further assessment might be required to establish more precisely the likelihood of harm as a basis for determining the priority for improved control measures. |
| Substantial | Considerable resources might have to be allocated to reduce the risk. If the building is unoccupied, it should not be occupied until the risk has been reduced. If the building is occupied, urgent action should be taken. |
| Intolerable | Building (or relevant area) should not be occupied until the risk is reduced. |

(Note that, although the purpose of this section is to place the risk in context, the above approach to fire risk assessment is subjective and for guidance only. All hazards and deficiencies identified in this report should be addressed by implementing all recommendations contained in the following action plan. The fire risk assessment should be reviewed regularly.)

Life Safety Fire Risk Assessment Certificate of Conformity

This certificate is issued by the organization named in Part 1 of the schedule in respect of fire risk assessment provided for the person(s) or organization named in Part 2 of the schedule at the premises and / or part of the premises identified in Part 3 of the schedule.
